EDUCATION

University of Cincinnati

Bachelor of Science, Computer Science

Expected: April 2027

GPA: 3.7

- Relevant Coursework: Data Structures, Operating Systems, Computer Networks, Programming Languages, Software Engineering, Information Security, Intro to Cloud Computing, Design and Analysis of Algorithms, AI Principles and Applications, Discrete Structures, Database Design and Development
- Honors and Awards: Dean's List (every semester), UC Global Scholarship, CEAS Outreach Scholarship

EXPERIENCE

AES Corporation

Data Science Intern

Dayton, OH

August 2024 - January 2025

- Developed Python and SQL pipelines in Snowflake to process and validate **1M+** operational records, reducing reporting latency by **30%** and improving the reliability of downstream analysis
- Built and evaluated PyTorch models to forecast asset failures, improving prediction accuracy by **17%** over baseline heuristics
- Analyzed large-scale operational datasets and validated engineering KPIs, improving asset-performance analysis by **15%** and supporting data-driven reliability decisions
- Collaborated with engineering and operations teams to translate technical requirements into scalable data solutions deployed across multiple substations in Ohio

Great American Insurance Group

Software Development Intern

Cincinnati, OH

May 2024 - July 2024

- Enhanced an internal portfolio-analysis tool to evaluate **900+** cloud-native applications across Java, .NET, and Node.js, identifying 63 projects with low test coverage and 337 deprecated buildpacks
- Identified **12,880** high-risk dependencies and application configuration vulnerabilities, translating findings into prioritized remediation guidance for engineering teams across the enterprise portfolio
- Diagnosed application and service issues across Windows Server and RHEL 8/9, strengthening system reliability through structured error handling, logging, and root-cause analysis
- Automated JSON, Markdown, and Excel reporting workflows covering application health, compiler compatibility, and platform compliance, enabling engineering teams to prioritize enterprise-wide risks

PROJECTS

AquaCoach

August 2025 - Present

- Architected and developed a consumer iOS application using Swift, SwiftUI, and Combine, integrating Apple Health through HealthKit, SwiftData persistence, personalized hydration goals, analytics, and scheduled reminders
- Engineered a beverage-specific hydration engine with configurable hydration ratios and penalty logic, powering intake tracking, streaks, long-press quick logging, and progress insights; validated functionality across 15 end-to-end test cases

Client-Server Networking System

January 2025 - April 2025

- Engineered a cross-language client-server system with a Python socket server and Java client communicating over TCP/IP, defining a structured application-layer protocol for bidirectional message exchange
- Implemented message parsing and validation, socket lifecycle management, and connection-failure handling to maintain reliable communication and prevent malformed requests from disrupting the system

UC Cryptocurrency Club Platform

January 2023 - April 2024

- Developed Java backend services and RESTful API endpoints for research publishing, attendance tracking, event management, and member governance, supporting CRUD operations and processing member activity data
- Designed modular, object-oriented components and input-validation workflows to integrate four platform modules, centralizing club operations and automating previously fragmented administrative tasks

SKILLS

Languages

Python, Java, C++, Swift, SQL, TypeScript, JavaScript, HTML, CSS

Frameworks & APIs

PyTorch, React, Node.js, REST APIs, SwiftUI, SwiftData, HealthKit, Combine

Cloud & Data

Snowflake, AWS, Azure, DynamoDB, Power BI

Systems & Tools

RHEL, Windows Server, Git, Xcode, Linux, Agile, TCP/IP, Socket Programming
