EDUCATION

University of Cincinnati

Expected: April 2027

Bachelor of Science in Computer Science

GPA: 3.7

- Relevant Coursework: Data Structures, Operating Systems, Computer Networks, Programming Languages, Software Engineering, Design and Analysis of Algorithms, Information Security, Cloud Computing, AI Principles and Applications, Discrete Structures, Database Design and Development
- Honors and Awards: Dean's List (every semester), UC Global Scholarship, CEAS Outreach Scholarship

EXPERIENCE

AES Corporation

Dayton, OH

Data Science Intern

August 2024 - January 2025

- Developed **Python** and **SQL** pipelines in **Snowflake** to process and validate **1M+** operational records, reducing reporting latency by **30%** and improving downstream system reliability
- Built and evaluated **PyTorch** models to forecast asset failures, improving prediction accuracy by **17%** over baseline heuristics through feature engineering, model iteration, and performance evaluation
- Analyzed large-scale operational datasets and validated engineering KPIs, improving asset-performance analysis by **15%** and supporting data-driven reliability decisions
- Collaborated with engineering and operations teams to translate technical requirements into scalable data solutions deployed across multiple substations in Ohio

Great American Insurance Group

Cincinnati, OH

Software Development Intern

May 2024 - July 2024

- Developed a developer-platform analysis tool to evaluate **900+** cloud-native applications across **Java**, **.NET**, and **Node.js**, identifying 63 projects with low test coverage and 337 deprecated buildpacks
- Identified **12,880** high-risk dependencies and application configuration vulnerabilities, translating findings into prioritized remediation guidance for engineering teams across the enterprise portfolio
- Diagnosed application and service issues across **Windows Server** and **RHEL 8/9**, strengthening system reliability through structured error handling, logging, and root-cause analysis
- Automated JSON, Markdown, and Excel reporting workflows covering application health, compiler compatibility, and platform compliance, enabling engineering teams to prioritize enterprise-wide risks

PROJECTS

Equity Research Agent | [GitHub](#)

August 2026 - Present

- Built a Python-based research agent that retrieves and normalizes SEC 10-K/10-Q and XBRL data, compares reporting periods, scores material changes, and generates source-linked research leads
- Integrated the OpenAI Responses API with Streamlit, caching, rate limiting, and Markdown/JSON exports; developed seven unit tests to validate retrieval, comparison logic, and reliable output generation

AquaCoach | [GitHub](#)

May 2025 - Present

- Architected and developed a consumer iOS application using Swift, SwiftUI, and Combine, integrating HealthKit, SwiftData persistence, personalized hydration goals, analytics, and scheduled reminders
- Built a configurable hydration engine supporting beverage-specific ratios and penalty logic, intake tracking, streaks, quick logging, and progress insights; validated product functionality across 15 end-to-end test cases

Client-Server Networking System | [GitHub](#)

January 2025 - April 2025

- Engineered a cross-language client-server system with a Python socket server and Java client communicating over TCP/IP, defining a structured application-layer protocol for bidirectional message exchange
- Implemented message parsing and validation, socket lifecycle management, and connection-failure handling to maintain reliable communication and prevent malformed requests from disrupting the system

SKILLS

Languages

Python, Java, C++, Swift, SQL, TypeScript, JavaScript

Frameworks & APIs

PyTorch, OpenAI Responses API, Streamlit, REST APIs, React, Node.js, SwiftUI

Cloud & Data

Snowflake, AWS, Azure, DynamoDB, ETL, XBRL

Systems & Tools

RHEL, Windows Server, Git, Xcode, Linux, Agile, TCP/IP, Socket Programming
